# TEMPLAR

The Industry Standard for Translation & Communication.

Are you in control?

It's a loaded question–being in control of your trading community usually means managing a variety of proprietary systems cobbled together across your networks–not to mention inter operating with your partners and vendors.

Imagine a solution, a single application, that translates data, provides you complete control of your trading community, offers you unparalleled security features and allows you to send any kind of file, EDI or otherwise. That solution would put you in control, reduce your reliance on a VAN, free up your internal IT resources from watch-dogging your EDI solution and give you peace of mind that your data is being sent securely and automatically.

You don't have to imagine anymore. That solution is Templar–a Java-based application that supports a variety of databases, security algorithms and signature types. It is a robust EDI/INT translation and transmission solution with simple navigation designed to give you full control over your trading community–from managing trading partner profiles to monitoring the flow of data. What's more, with credential-based security, you can control which users are able to access which portions of Templar's functionality. Templar is designed to reduce the complexity of today's business-to-business data exchanges. It is a single, simple solution to translate any data and securely transmit it over the Internet to partners, vendors and customers.

Still Using VANs?

Then you're familiar with: setup fees, monthly fees, transaction fees, interconnected fees, translation fees along with many others.

Eliminate all these fees with TEMPLAR

By leveraging the power of the Internet, certified security and acknowledgement of delivery, TEMPLAR offers the simplest alternative to VANs for a fraction of the cost.

TEMPLAR *SaaS*

Now Available In 3 Versions.

TEMPLAR – **SaaS**

- Want a simple and inexpensive EDI solution?
- Have limited IT resources?
- Handle few EDI transactions or trading partners?

Designed for companies that want to outsource. Software as a service, hosted solution. Pay per use.

TEMPLAR – **Desktop**

- Want the security of an in-house solution?
- Need a single computer application?
- Trade with less than 15 partners?

Designed for companies that need to trade with few trading partners. It is a client only application that doesn't allow other clients to connect to it.

TEMPLAR – **Enterprise**

- Need a robust Client-Server Gateway?
- Communicate with multiple trading partners?
- Provide EDI services to several customers, divisions or entities within your organization?
- Wish to integrate with corporate databases?
- Manage EDI remotely?

Designed for companies that trade with many trading partners. Can be run as a service in Windows and can connect to any third-party database and multiple clients.

KEY TECHNOLOGIES

TEMPLAR employs core technologies to make it one of the most robust cost-effective EDI/INT solutions on the market.

Encryption Algorithms:

DES, Triple DES/DESEDE3, Rijndael-256, Blowfish, GOST, MARS, RC4, RC2, CAST 128, Serpent, Two Fish and IDEA.

Transmission Protocol:

FTP, SFTP, SMTP, TCP/IP, HTTP(S), Direct File Transfer, SMTP.

Data Translation and Data Mapping:

TEMPLAR software separates the mapping functionality from the production data translation engine. This unique feature allows for lightning fast translation.
